

WATER HEATERS: TRADITIONAL VS TANKLESS

Reasons to Choose a Traditional (Tanked) Water Heater:

- ✓ Lower cost to purchase
- ✓ There are certain situations in which you cannot install tankless
- ✓ You will still have hot water during a power outage

Reasons NOT to Choose a Traditional (Tanked) Water Heater:

- ✓ It is an expensive ticking time bomb. Leaks are not a matter of if but when. Average damage from a leaking water heater is \$4400.
- ✓ Outdated technology
- ✓ Shorter life span (8-10 years)
- ✓ There is a constant flame in your home
- ✓ You may run out of hot water depending on size of your tank
- ✓ You are wasting money on your utility bill to constantly heat water around the clock when it is only used for a few hours a week.

Reasons to Choose a Tankless Water Heater:

- ✓ Saves space! You will gain a closet when you switch to tankless.
- ✓ You will never run out of hot water - it is continuous and heated when you need it.
- ✓ You will save money as it costs less to operate. You do not have to reheat water over and over again.
- ✓ No tank to leak so you avoid water damage!
- ✓ Safety - there is no open flame 24/7
- ✓ Longer life span (20-25 years)
- ✓ Some tankless water heaters provide instant hot water with built in recirculation pumps.

Reasons NOT to Choose a Tankless Water Heater:

- ✓ Initial upfront investment
- ✓ Will not work in power outages
- ✓ They cannot be installed in every home
